

ATG ACCESS

ATG Access

114/670

The ATG 114 bollard is literally the big brother of the ATG 101, with an increased diameter offering a more imposing deterrent to unauthorised vehicle attack or usage.

There are 2 options available for this product; a 3.2mm wall thickness and a 6mm wall thickness.

The 3.2mm version comes in stainless steel only and is a lightweight, deterrent bollard with an attractive, aesthetic appearance.

The 6mm version comes with lift-assist as standard and the additional choice of black and RAL colours to finish, offering heavy duty ram raid protection for multiple applications.

On the heavy duty 114/670 version the unique lift-assist mechanism enables us to supply heavy duty, robust security. This can be utilised by all due to the mechanism reducing the product lifting weight by around 70%.

Products fitted with lift-assist have an integral mechanism which reacts when the user begins to raise the bollard and smoothly assists the rising of it into the locking position. The mechanism also acts as a damper when lowering the bollard.

|                           |   |
|---------------------------|---|
| <b>Finishes available</b> | Galvanised, Black, Stainless Steel or RAL Colours |
