

ATG ACCESS

ATG Access VP100

The ATG Access VP100 is an automatic bollard completely reliant on an operator. This type of bollard can be utilised on either large, manned car parks or in either residential or commercial applications operated by an individual hand-held key fob.

The Product

The VP100 consists of a 168mm bollard in stainless steel or a 200mm diameter in black which stands 700mm tall.

The aesthetics of the VP100 are pleasing enough to fit into any urban landscape, yet still maintains a stern, deterrent preventing any would be ram raiders.

The Application

Ideal for large manned areas such as car parks or industrial applications with security huts.

The Benefits

- Superior finish and aesthetics.
- Fast operating system – 4 seconds up and 4 seconds down.
- Supports already manned areas perfectly for optimum access control.
